

FLUSHMATE®

Genuine Replacement Parts

Effective Date: December 1, 2016

501-B Series
(Discontinued)

504 Series

503 Series

Flushmate® Component Parts

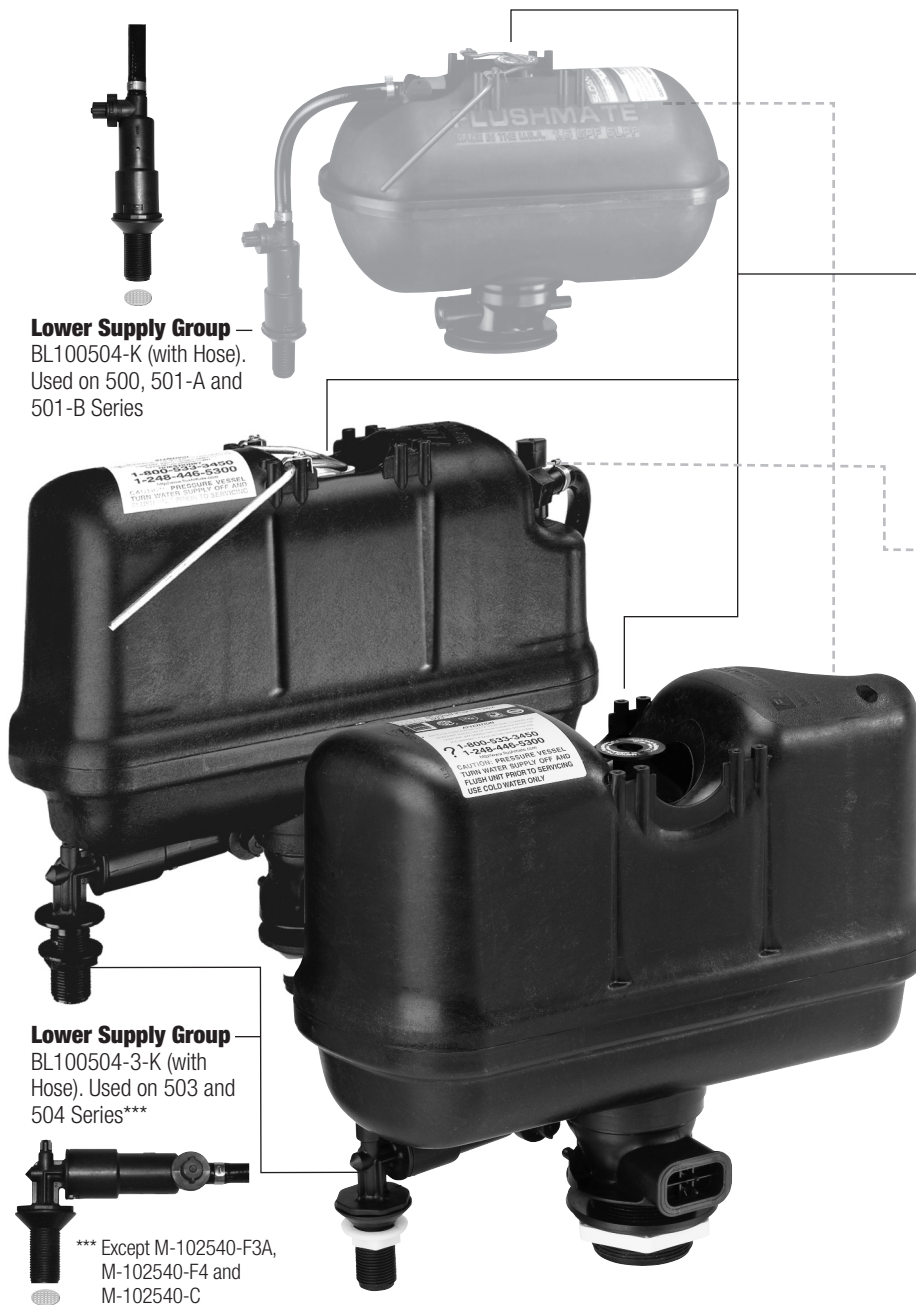

Before starting your repair project, write down the model number, serial number, and Series number located on the Flushmate vessel label inside the toilet tank. Also have handy the name of the manufacturer of the toilet. With this information, you can identify the replacement part you need.

This price sheet is organized by Flushmate Series. Begin with the Series number and move on down to the part that you are looking to replace. A visual representation of the models, assemblies and parts are included inside to help with determining the correct replacement part.

Flushmate products cannot be retrofitted to existing gravity toilet bowls. Please see “Complete Change-Out Kits for Two-Piece Toilets” section for specific change-out information of non- Flushmate pressure toilets.

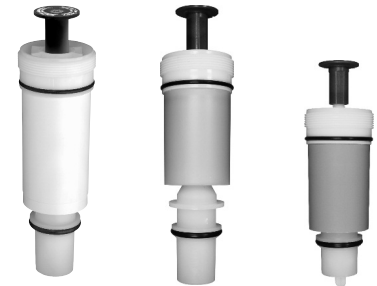

Flushmate Label
 Model, Serial and Series numbers found here.
