

Autofeed Collated Screws

- Phosphate** Phosphate coated screws are designed to resist corrosion and are intended for INTERIOR applications only. They are easily painted.
- Zinc** Zinc coated screws have only a basic corrosion resistant coating and should be used in INTERIOR applications only including subfloors, furniture, etc.
- Ultra Coated** Ultra Coated screws offer the best rust and corrosion protection and are composed of zinc and aluminum flake coating in a water oxide formula. They are free of any toxins, are environmentally friendly and resist salt spray corrosion. They are also ACQ compliant and self repairing. Ultra Coated screws can be used for INTERIOR and EXTERIOR applications.

THREAD TYPES

- Coarse** Coarse screws drive quickly and are ideal for wood to wood or drywall to wood applications
- Fine** Fine threaded screws drive slower than coarse threaded screws but offer better holding power. Ideal for Wood, Metal, Drywall or Plaster to Metal applications
- Fine/Coarse** Combination threads feature coarse threads near the driving point and fine threads near the head of the screw. This results in the quick driving ability of coarse threaded screws combined with the security and holding power of finer threaded screws.
